That's the title of a Washington Post piece this week that pretty much rehashes much of what we already know about EA's FIFA 18, released earlier this year. Here are some highlights: "Electronic Arts is on a four-year cycle, and FIFA 18 was the first time it had to 'learn' how to make a more inclusive game. With FIFA 17, the publisher had a lot of 'room to maneuver' because it could make changes based on fan feedback. With FIFA 18, the nature of player feedback – positive, negative, and neutral – was new, as were the specific data points that EA was able to use to monitor fan engagement." "In FIFA 17, EA had plenty of time to prepare for the U.S. presidential election by quickly removing a series of inflammatory images – like one showing a team of soccer players dressed as the Ku Klux Klan, which offended a great many fans. They quickly removed the images. They added more licensed players, too." "With FIFA 18, EA learned that one of its most popular elements was 'inclusion': the fan-driven culture of fans creating content, and other fans celebrating and 'listening' to that content." "The solution? More of it, and also new ways to monetize it, at least for those with an audience. EA has said that inclusion can play a big role in the game's box-office returns, with more than half of the top-grossing players being women." "One of the best-case scenarios for FIFA 18 is a slight drop from its predecessor, with FIFA 17 selling 6.6 million copies in
