History AutoCAD was created by Alias Wavefront, the developer of the widely used 3D modeling software, 3D Studio Max. 3D Studio Max 3D graphics technology was used to create the first AutoCAD drawing on October 18, 1986, and the first complete AutoCAD drawing (a drawing of the Rockwell International building) was completed on July 1, 1987. The first major feature of AutoCAD was a feature called "interactive block drafting". This allowed users to modify an existing drawing in an interactive editing mode. A follow-up to this is "SnapToGrid" which allows points, lines, and planes to be snapped to a grid. This is useful when creating floor plans or for aligning objects. "Layer Management" allows users to insert, delete and change existing layers and layers on the same sheet can be combined into a layer group. The current version of AutoCAD is 2016.
