I want to implement a webcam feature as a part of my application. Does Android support webcam functionality? A: Of course, but do you want to use the integrated one or your own? if you want to use your own, there are many ways to do this: using a library like OpenCV, see the following link: using the camera app: Camera myCam = Camera.open(); myCam.takePicture(); myCam.release(); if you want the default camera app to work for you, there is no way to do this, because Google doesn't want you to install apps from other source (e.g. other stores), as the camera needs root privileges. Q: How do you set the meta data of an HTML5 video? I am using the HTML5 video tag to embed a video on my site. I'd like to be able to set some meta data for this video, like title and description. How do I do that? I see the object tag but it doesn't seem to do much. A: To add a meta tag use: A: if you want to do it in javascript, you can just call window.getMetadata() to get the metadata : window.

Description: Portable Keyboard Statistics is a small software application whose purpose is to help you record all keystrokes with minimal effort. The advantages of being portable Since this is the portable version of the program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to capture pressed keys on the breeze, without having to go through installation steps. Simple looks You are welcomed by a clean feature lineup that empowers you to tweak dedicated parameters with just a few clicks. Everything is kept as basic as possible, so there's support for only a few configuration settings that you can play with. Main features Portable Keyboard Statistics gives you the freedom to gather information about each pressed key, namely key name, virtual code, hexadecimal value, as well as the number of times each key has been pressed. Basically, the application builds up statistics about the pressed keys and is able to remember them when you close and reopen the main panel. What's more, you are allowed to start or stop the monitoring process and automatically activate the key recording mode when you run the utility. Last but not least, it is important to mention that Portable Keyboard Statistics automatically exports the information to XML file format after you close the program. The XML file is saved to the same location where the EXE item is stored. Performance During our testing we have noticed that Portable Keyboard Statistics carries out a task quickly, and no errors showed up throughout the entire process. It doesn't eat up a lot of CPU and memory, so the overall performance of the computer is not affected. Bottom line All in all, Portable Keyboard Statistics offers a straightforward software solution for helping you gather statistics about captured keystrokes.
