I love to sing with other people and I love to be onstage. I've been doing it for more than 50 years," said Turner. "I'm not afraid of music anymore, I am fearless, I have fun. Movie Icon Pack 16 is a nicely designed collection that brings you some fresh icon replacements for your regular files and directories, as well as for dock applications. The icons included in the set come in two distinct formats, namely ICO and PNG. The former is the native format supported by Windows for any files and folder, while the latter is used mainly by dock programs that will handle this particular file type for the icons of the applications they host. Movie Icon Pack 16 contains 64 high-quality icons in 16x16, 20x20, 24x24 and 32x32 formats. They are useful for replacing the standard icons used in Windows XP (XP is not supported by this pack), as well as for use in dock applications.

1. Field of the Invention The present invention relates to a robot, and more particularly, to a method and robot for providing a force feedback.

2. Description of the Related Art Robots are mechanical devices for assisting humans in their work. Robots may be generally classified into three groups according to the way they operate, namely, (1) the fixed type, (2) the dynamic type, and (3) the human type. In the human type, the actions of the robot are adjusted according to the action of a human and the robot is able to perform various actions. Unlike the fixed and the dynamic types, the human type of robot is a very complicated robot that can carry out a variety of operations. The robot of the human type generally comprises a mechanical mechanism, a control mechanism, a sensing mechanism, and a power source. In general, the sensing mechanism for detecting the actions of the robot or the human and the control mechanism for controlling the sensing mechanism and the robot's mechanical mechanism are all located in the body of the robot. In addition to the mechanical structure and control mechanism, the sensing mechanism and the control mechanism of the robot comprise several components, such as a controller, a microprocessor, and a power supply, etc. For example, the controller receives a signal of the sensing mechanism, such as an accelerometer, an accelerometer, a force sensor, a joint sensor, and a human sensor, and generates a control signal for a mechanical mechanism according to the received signal. The microprocessor processes and analyzes the control signal generated by the controller, and transmits the result to the power supply for supplying the needed power to the controller. However, the sensing mechanism of the existing robot lacks real-time control and feedback, and thus the robot cannot precisely control its movement according to the movement of the human. Therefore, the robot can only carry out a fixed or human-like operation.
