2.3.2.2 3D Modeling In order to create a 3D model, the designer has to follow several steps that involve rasterization and vectorization. CAD and CAE applications can also create models that include both features. 3D modeling enables you to create a model using information from 3D scanners or using other scanning devices. 3D software typically begins by creating a 3D model based on the original object or project model. This can be done by scanning objects using a laser scanner or other scanning device. 3D modeling can also be done using a range of existing drawings. Depending on the scanning device and the type of data, 3D models can be viewed in many ways. For example, CAD applications can be used to view the model from a perspective that enables the user to see the object from different angles. Figure 2.4 shows a 3D model of a house. **Figure 2.4** 3D model of a house The steps required to create a 3D model are explained in more detail as follows: 1. Create a 3D model. 2. Add features to the model. 3. Position objects in the model. 4. Import the model into the CAD application. 5. Add the features that were not scanned. A 3D model created by CAD applications is based on the original 2D model. In order to create 3D CAD models, you need the original 2D drawing file to create the model. New in AutoCAD 2023: Visual Style adjustments With the introduction of Visual Style adjustments to AutoCAD, users can adjust the appearance of AutoCAD windows, palettes, and custom toolbars. These changes can be made to any visual style setting, including toolbars, in the style catalog. In addition, some of the visual style settings now support changes to the way AutoCAD and cross-platform applications display and render images. Visual Style adjustments allow you to apply different palettes to AutoCAD palettes. When creating a new style, or when opening a previously saved style, you can now create a specific palette, and then later change the visual style that it appears in. For example, if you have previously created a light gray color palette, and you want to make all your palettes in your
