Today, Photoshop is one of the most widely used image editing software products in the industry. There are approximately 5 million users of Photoshop worldwide and it is used by artists, designers, and marketers. Many of the most commonly edited images on the Internet are images created in Photoshop. Photoshop's versatility and affordability make it very popular. [This article is not an advertisement for any particular company or type of software. It is a simple explanation of what Photoshop is and how to use it.] Software Architecture When Photoshop first shipped, it consisted of two separate applications: one for raster-based images, and one for vector-based images. These two applications are housed in the same program, now called Adobe Photoshop, which is a single application. Raster-based images are images that use an 8-bit raster file format, while vector-based images are images that use a different file format, typically a vector format. A raster image is comprised of pixels that each contain a single color or shade. A vector image, on the other hand, is comprised of small numbers of pixels that together define the shape of an image, like a box, heart, or organic form. Raster and vector-based images can be placed onto a common layer. They can also, therefore, be modified together, like a pair of pants, making them indistinguishable from a single image. Photoshop places layers on a workspace. Each layer provides a "plane" on which an image can be placed and manipulated. Layers can be added to and removed from a layer, and they also appear with a "ghost image" around them, showing that the objects are merely on a layer and not an object on their own. Layers can be moved, scaled, rotated, or moved, scaled, and rotated. There is also a group of "spotlights," which serve as an individual layer on top of an existing image. An image can be dragged into these spots so that it is placed inside the spotlight. The image can also be moved inside the spotlight and tweaked. The most important function of the main workspace is the Layers panel. Through the Layers panel, you can move, copy, cut, delete, and copy and delete spots. The Layers panel also has the ability to clone, duplicate, and paste layers. Photoshop allows you to place and resize the objects on the layer and edit their properties. The fastest way to place and resize an image is to use the Select tool and click

Kim Kardashian West and Kanye West welcome their third child together, Chicago West, on Friday, Oct. 12, in New York City. Kardashian West, 35, and West, 41, have been married for a year and a half. The two welcomed their first child together, Chicago West, in June 2018. The couple's second child, a daughter named Saint, was born in January. On Saturday, Oct. 13, the pair posted a video of themselves on the phone, which showed the footage that went into the making of their third baby. The video has since been viewed more than 14 million times on Instagram. "The privilege we are given to be given these three beautiful blessings is so humbling and inspiring," said Kim, who is pregnant with the couple's third child, in a statement released on Instagram. "We are really looking forward to welcoming a new member of the family in January. He or she is in a really good place right now!" The couple are also parents to North West, 3, and Saint, 1, with ex-husband, rapper, and music producer, Kris Jenner. Kim and Kanye West married in 2014, and have a combined 22 million followers on Instagram and 12 million followers on Twitter. The couple's upcoming wedding was the subject of much debate and speculation in August of last year, when Kardashian West wore a white Gucci dress and matching pair of white pumps for her now-infamous appearance in Paris Fashion Week. "I feel like any day now I could be having my wedding," she said to the fashion industry at the time. The dress was a hit. The wedding was announced in the summer, with the wedding date set for the end of the year. The couple recently announced they have booked the Plaza Hotel in New York City to host the event. Kim also said that they're planning on a "brilliant wedding in Paris." As of Saturday, Oct. 13, a representative for the couple had not yet responded to PEOPLE's request for comment.Never miss a thing from Belfast and beyond - sign up for FREE updates direct to your email inbox Subscribe Thank you for subscribing See our privacy notice Invalid Email A new device being developed by Ulster University scientists could revolutionise the way trees are planted.
