The latest version of AutoCAD is 2017 (17.0), released in February 2017. AutoCAD is considered by many to be the dominant professional 2D drafting and design software application. AutoCAD is used by engineers, architects, designers, drafters, and others in a wide variety of industries, and is well known for its powerful functionality, ease of use, and high price. In 2015, Autodesk reported that AutoCAD (on a Mac) was the most popular CAD app on the Internet, with 19% of all those using CAD Internet visits. This was followed by only CorelDRAW (13%), MicroStation (11%), and AutoCAD LT (10%). From April 1 to June 30, 2015, AutoCAD was the top-paid program on the Mac App Store, with a total of $19,287,404 in revenue.[1] History AutoCAD was developed from 1982 to 1985 at the Palo Alto Research Center (PARC) by a team led by David W. Nielsen and John Warnock. As a result of the writing of the code, an investment bank used the PC architecture for their financial data workstation as well. The three most important early supporters were Anthony Powers of Cray Research, Jean Paoli of Sequoia Systems, and Donald E. Knuth of Stanford University. In the early 1980s, the only CAD systems available were on mainframe computers, and even these could be expensive. To design a desk-top system using a desktop computer, however, the cost and complexity of drawing bezier curves on a low resolution bitmap can be prohibitive. Therefore, PARC built a fast, real-time prototype of a system that could be easily connected to a desktop computer.[2] A version of the prototype was presented at the SIGGRAPH'87 conference in Chicago.[3] The first working version of AutoCAD was introduced to the world on December 14, 1982, at the Fall Joint Computer Conference. The US release was on December 20, 1982. AutoCAD is marketed as a single product, but the underlying code base is actually a set of modules, known as AutoLISP, which allow the creation of specialized tools. The "Productivity" suite of tools can be installed on a computer, while the "Geometry" and "Drafting" suites are available as separate stand-alone applications. The first version of AutoCAD to

The proposal is projected to save $8.8 billion over a decade, but critics say the bill could have a greater impact on older Americans. ADVERTISEMENT AARP President Andy Lapham urged Senate Republicans to consider their impact on older Americans during a news conference Thursday. Lapham and other supporters of the campaign say the proposal, in the legislation known as the Tax Cuts and Jobs Act, would remove subsidies that help pay for low-income Americans' medical care. "AARP has been at the forefront of fighting to make sure that the tax cuts don't hurt seniors or people with disabilities," Lapham said. He said AARP's four million members are eligible for Medicaid and other coverage, including Medicare and the Children's Health Insurance Program. "If the proposals that are in this bill go forward, then seniors and people with disabilities will pay more for health care," he said. As of 2014, about one in four Americans was 65 or older, and the aging population is expected to rise to 24 percent by 2050, according to the Census Bureau. ADVERTISEMENT Lapham said one in five Americans has at least one chronic disease, and medical costs associated with that population are projected to increase. He said the provisions in the bill could also prevent Medicare from covering prescription drugs. "Right now, the only way that seniors can get prescription drug coverage is if they have an employer that offers that coverage," he said. ADVERTISEMENT AARP is urging members to urge their senators and House members to oppose the measure that would affect them.Q: What tools are available to create vector illustrations? Are there any tools for creating vector illustrations? I want to create vector illustrations using something similar to photoshop or illustrator. A: There are tools to create your own vector files from bitmap images. You can use the open source DrawIt! 2 or search for other programs on Google to use them. But, it's not exactly like Adobe

If I write a C++/CLI library which then uses the native libraries liba.lib and libb.lib, how can I get type

information for those unmanaged libraries? I want to be able to do the following: typeof(T) requiresDynamicRTTI = true; // unmanaged libraries are in a separate static lib, liba.lib, libb.lib I don't really want to use macros, as I don't want the code in the DLL to be polluted with the calls to the DLL. A: I have an answer, and an open issue on MS Connect. There is a function in the CRT called GetTypeInfoCount which returns the number of type info tables present in the lib. See
