What's New in the AutoCAD?

Active Laser Mapping: Automatically and accurately create laser line maps from photo overlays with your camera. The new eXtended Projection (EXR) and Multi-pass Scanner (MPS) technologies let you use an entire family of lenses for your camera, which lets you capture more of the scene. (video: 1:43 min.) Equivalent Views: Drawing in scale enables you to view and manipulate drawings in 2D from 3D and 3D from 2D. (video: 1:40 min.) Renewable Design Services: The more you integrate AutoCAD with a variety of devices, the better your drawings and models become. Any time you touch a design, you can create as many visual references as you need to keep track of changes and changes in design details. Digital Paper: With AutoCAD 2023 you can create and store color-coded versions of drawings for your clients. They can review them on a smaller screen, and they'll be able to share the version of the drawing that they want. This allows for more efficient communications in both directions. (video: 1:16 min.) Enhanced 2D Editing and Support: As you create, keep track of changes with a snap preview of how drawings will look as you finish them. Use the ribbon and keyboard to move, edit, and transform objects and control dimensioning with a

familiar set of commands. Zooming in on the scale of a 2D drawing lets you see the difference between viewports and size along an edge, which makes it easier to accurately adjust the size of your drawings. (video: 1:29 min.) Faster, Safer Drawing New wireframe fill mode lets you fill complex drawings with a visual guide so you can work more efficiently. (video: 1:25 min.) Extend the interface speed limits for simple geometry: When you draw a line or circle, you can now constrain the size and shape of the drawing to a speed limit in both the drawing and editing screen. (video: 1:34 min.) Drawing in 3D Views: You can place and show 3D views in your drawings, either in alternate views on the 3D Modeling tab, or separate 3D views on the 3D viewports on the 3D Tool Bar. (
