dictionary to JSON using JavaScriptSerializer This is not a duplicate of any other similar questions, as this question is specific to converting a dictionary to JSON, using JSON.Net in C#. I have a dictionary which I want to convert to JSON. I am currently using JavaScriptSerializer like this dictionary.ToString() Which works for simple types. For example it converts DateTime to [string, string, string, string]. How do I convert this dictionary to JSON, using JavaScriptSerializer or any other method? A: You need to get rid of those [...], so your result will be of the format [key: "value"] instead of [key1: value1, key2: value2,...]. With JavaScriptSerializer, you can do this: var serializer = new JavaScriptSerializer(); dictionary.ToString().Replace("[", "").Replace("]", "").Replace("{", "").Replace("}", "").Replace("(", "").Replace(")", "").Replace(",", "") If you want to go JSON.Net, you need to use a custom JavaScriptConverter and return your JSON accordingly.
