What's the difference between the LG and ASUS phones? With floor jam, you will be able to experience music VR on your smartphone just like you're at a party. Through VR-based headphones (and optional VR standalone headset). We know it's been awhile since we updated you on the progress of this game and we're sorry for that. As we mentioned, the game is very beta and we're currently working on fixing things. What we can tell you is that it will run amazing on most smartphone VR headsets/experiences. This game is an entirely new concept where you are playing on the floor, dancing and jumping

in real time to the music. But this is just an example of how people use music VR on the phone, not the only way to play it. In fact, we will soon release some of the best VR experiences and games in the next few weeks. We want this game to be something that everyone can enjoy. And that's why we're building a platform for VR-based music games that will be open to all headset/experiences. We plan to make this a playlist on VRSE. You can check out the walkthrough video for this game on YouTube! And, for a full list of features, check out our website! Follow us on Twitter, Facebook and Instagram for more updates! Additional Notes: The project is beta. We are releasing this game to the community and seeing what they like and don't
