Internet Download Manager 6.21 Build 3 Final (preactivated) RePa · · bangers in a box - revy.comQ: Call function with variable arguments in one go Is there some way to make this work, without calling my_function with the the first argument NULL? If there is no way to make that work how can I create a function with variable arguments that can call the function with only the correct arguments? int my_function(char arg1, int arg2, char arg3); int test(...) { my_function(NULL, 2, 'a'); } A: It's not possible. You'd have to write
