Easy-to-use program for converting files from Outlook format to CSV format. It converts your contacts, appointments, tasks and notes to CSV format and works with Outlook 2003-2007. "It's not only a converter, it's a word processor and mail editor as well. You can edit your messages like a normal word processor and convert them to HTML after. You can choose as many styles as you want for a text element. It is quite a lot easier to modify the look of a normal text, even in times when it wasn't possible yet." "Using tuxmode, we could free space from our folders without losing our messages and attachments, simply by using a bookmark image. Another great feature of Tuxmode is it's ability to change the color of 'highlight' images (ones with a color tag of (80,100,180,210,255,40,75,50,70) in the HTML Body section) using the options panel. You can even choose to attach a picture on the email when the user clicks on the link attached to the HTML Body section. This can even be set up to only apply to certain addresses. This is all accomplished with the click of a single button. So, if you need to send a presentation or video, you can do so while retaining the full HTML Body section and attachments of a completed email message. It's all included for you." "The tuxface module has come a long way. It now includes highlighting in the email client and archive data has been removed. It also allows you to go full screen, etc." "Hi, I've been using tuxface for a few weeks now and I'm amazed at how easy it is to use. There are a lot of features and the modules are well documented and easy to work with. I really like the way the user is given an option to use 'image setup' which comes with various sizes, including 'large' which is 900x600, and the exact same file for both 'small' and 'large' so if the size is different for example, no problem. Also the grey 'default' background can be changed to any colour! If it only did that then I'd be over the moon. All in all tuxface is great. "When I set it up, it looked awful in Outlook.
