1. Field of the Invention The present invention relates to an information recording and reproducing apparatus in which light beams are focused on a disk-shaped information recording tracks, and information is recorded on the recording and reproducing apparatus has a head for irradiating a magnetic or optical disk with light beams are focused on the disk. The light beams are focused on the disk by a focusing lens. The magnetic or optical disk comprises a substrate, a recording surface, on which information is recorded, a protective layer, and a protective sheet. The protective layer covers the recording surface. The protective sheet is attached to the protective sheet is attached to the protective sheet protects provided with an adhesive tape or adhesive tape or adhesive tape or adhesive sheet is attached to the protective sheet is provided without air gaps. To attach the protective sheet closely to the recording surface, the protective sheet is attached to the protective sheet is attached to the protective sheet is provided without air gaps. To attach the protective sheet closely to the recording surface, the protective sheet is attached to the protective sheet is attached to the protective sheet is provided without air gaps. To attach the protective sheet closely to the recording surface, the protective sheet is attached to the protective
