The closest commercial equivalent to a paint program is probably GIMP, a free and open source image manipulation program that has many of the same basic features as Photoshop. There are even plugins and tutorials available for GIMP that teach new users how to use many of Photoshop's functions. Q: Emacs: How to fix incorrect indentation when using isearch-mode? I have emacs set up to open files and switch to the isearch-mode by default when opening a file. This works great on text files, but when I open a POD file (with C-c C-c) or a C++ header, it prints the entire line with a lot of space before the indentation. How can I fix this so it only prints the indentation? Here's what I've tried: The manual advice: I thought that maybe I could try the "I-search-mode-off-by-default-and-re-indent-on-match-or-search" advice, but it seemed to do nothing. The present invention relates generally to the field of semiconductor devices and fabrication processes, and in particular to complementary metal oxide semiconductor (CMOS) devices and fabrication processes. Conventional semiconductor devices are formed with features that are small compared to the wavelength of visible light. This enables the integration of many functions on the same semiconductor chip. Increasingly, however, a need has arisen for smaller, more compact devices. For example, new designs for wireless communications devices, such as cell phones, benefit from smaller size. Future generation wireless devices, such as next generation cell phones, will need to be smaller and consume less power. if you had kids?" "I would've tried to talk to him."
