**What's new in Elden Ring:**

**ENTER TARNISHED**

The world between was once filled with a virus - the Noble Phantasm of the legendary "Crimson Dragon" 13 years ago. The lives of the people were in crisis as the evil spread in its appetite, but in the midst of this calamity, an aspiring hero appeared. His name was Guard... He wandered off and slew the evil in a heroic way. Since then, the "Chinkogata"\*1, which is found in a stone circle, the Crimson Dragon's Noble Phantasm, has been sealed shut. The other monsters in the lands between have gradually vanished. The Elden Ring, using its Grand Summoning power, can restore the world between to its peaceful state. Hold the power that you hold in your hand... and rise, Tarnished... Rise, Tarnished, and become an Elden Lord in the Lands Between.

☆ **Guilds and Communities Become Powerful Players.** ☆

Your adventures don't end with a single player quest. You can bond with others as you play and become a guild that has power. Your Guild banner becomes the brain, and each NPC becomes the muscle of a "Community". Guild Leaders may even join together to form a Guild Alliance (Alliance), where they can collaborate together and, as they ascend in power, together become a single player Guild. You can manage the members of your Community from the Guild Housing. Together, within the well-built framework of a guild and a community, you will rise in power.

☆ **Leader Spirits Guide You to Ultimate Adventure!** ☆

Leading a Guild means each and every member is important. As you be the leader of a Guild, you get a role in the story. This Role-Play through the leader spirits that guide you... that are discussed "behind the scenes". You can choose whether the leader spirits present the truth and the way you want it to be, or they narrate as they best fit the current situation, even if its just for a bit. The Leader Spirits that hold sway over various roles allow even the smallest of things to become important.

\*1 Chinkogata. A mysterious jewel hidden in a stone circle. It was created 13 years ago by the bounty hunters of

Alcohol consumption is reportedly commonplace among autism spectrum disorder (ASD) subjects. The reasons for this high level of alcohol consumption are unclear but some investigators suggest that the underlying neurobiology of ASD predisposes this cohort to addiction problems. The primary mechanism involved in alcohol metabolism is the mitochondrial enzyme aldehyde dehydrogenase (ALDH), which breaks down ethanol to acetaldehyde. Multiple homozygous ALDH2 genotypes are present in the population, including the most common ALDH2(Z)12 allele. Under normal circumstances, ALDH2(Z)1/2 or ALDH2(Z)2/2 genotypes are associated with high levels of ethanol metabolism. Given their low activities and high genetic hom
