Re:downloading torrents with c# Hello, just entered last weekend to torrent hubs to download my next bittorrent for free but i was really suprised, it contains a file named: wondershare filmora 9.0.2.1 (x64) multilingual mchine-key-generate-windows-download- | 1:04 i can't see the movie in the torrent after decompressing, i was really suprised that this file comes along, do anyone else from the neighborhood can download it? Looking forward from your reply. A: The file 1:04 is the key. You can get more info about this file from here You can save it on a disk and then import it when you have a Wondershare Filmora Account. The file contains all its informations and even the serial number, this serial number must be write to a text file named: serial.txt. This serial number will be needed if you want to download the file again. My serial number: XX If you save this serial number, you can get all you files on your computer. Download in easy way: Launch the torrent file. Click on "Show properties" Click on "Remarks tab". Here you can find the serial number. Save this file, and then try to import it. Import the serial number from "serial.txt" in "Remarks" tab. Try to download again. Imported files are now available. Q: What's the difference between: using.defaultdict and a list I have some code as follows: paths = ['/babar/barf_et/', '/babies/barf_et/', '/spots/barf_et/', '/pratty/barf_et/', '/companies/barf_et/'] payloads = { 'path' : 'print repr(path)', 'foo' : 'print repr(foo)' } arr = [] for path in paths: arr.append(payloads.get(path)) print arr This is causing a type error, stating
