The history of AutoCAD and the continuing support and development of the product are described at the Autodesk site. The History of AutoCAD Version 1.0 - First Release Date: December 1982 Version 1.0 was originally released as a desktop app for MS-DOS and for IBM PC compatibles. The initial release included drafting and modeling tools. Modeling tools were a mainstay in later versions. AutoCAD was also designed to be a modeler, but it was not a professional level modeling tool. The specifications of the first version are described at the Autodesk site. Version 2.0 - December 1984 The first release of AutoCAD for DOS, Version 2.0 (1984), contained a revised command set and an AutoDraw. In 1986, Microsoft released the Windows version of DOS, Version 3.3, which supported AutoDraw. Version 3.0 - January 1986 This new release added features including dimensioning, bulge modeling, and double length to draft (a dimension that can extend from one line to another), and dimensional editing. The new release also introduced the ability to draw with line segments as well as arcs and circles. Version 3.1 - October 1988 This version introduced external references, which are symbols that can be linked to existing objects. AutoCAD later supported other types of references, such as hidden, specific dimension, and internal references. Version 3.2 - January 1990 This release introduced the ability to link a drawing with a template. A template is a document or data file that can be linked to any drawing file in a drawing project. Templates also contain references. Version 4.0 - March 1990 This release introduced multidimensional (MD) editing, allowing a user to edit 3D geometry. Version 5.0 - May 1991 This release added the ability to label an object in an AutoCAD drawing file. The labeled object becomes the "centering object" for that drawing. The centerline of that drawing is now constrained to a single line. Version 6.0 - August 1992 This version added a series of 3D

modeling features. These included 3D editing, 3D plotting, and 3D rendering, as well as improved dimensioning. Version 7.0 - March 1993 This release introduced a new user interface and extended many of the user commands. New commands included dimensions

Xref can be used to convert all types of files between AutoCAD and other CAD packages. File Formats The primary file formats of AutoCAD are: .DWG - AutoCAD's native drawing format. It is the only native CAD format that supports DWG (AutoCAD Drawing). DWG is AutoCAD's native file format. .DWGX - Supports AutoCAD Drawing content. .DWG2 - AutoCAD Drawing and DWG2 is a format derived from.DWGX. It is considered to be more stable than DWG2. .DWG3 - AutoCAD drawing format based on.DWG2 and allows support for both AutoCAD Drawing and DWG2. .DWG4 - This format is similar to AutoCAD Architecture format. It is based on.DWG3. It also supports both AutoCAD Drawing and DWG2. .DWG5 - This format supports CAD models based on AutoCAD and is used for making small models and for using with the 100 drawings per model limitation in AutoCAD. It is backwards compatible with.DWG. It also supports both AutoCAD drawing and DWG2. .DWG6 - This format is a cross between AutoCAD Architecture and DWG5. It can also be converted to DWG5. It is the native AutoCAD format for AutoCAD Architecture. It is also backwards compatible with.DWG. It also supports both AutoCAD drawing and DWG2. .DWG7 - This format is a cross between AutoCAD Architecture and DWG5. It can be converted to DWG5. .DWG8 - This format is also based on AutoCAD Architecture. .DWG9 - This format is a cross between AutoCAD Architecture and DWG5. .DWGX - Supports AutoCAD Drawing content. AutoCAD Architecture AutoCAD Architecture is a proprietary product derived from AutoCAD. It supports architectural and engineering applications and has been extended to make it fully compatible with several other CAD packages, including 3D-Civil. It supports 1:1, 1:2, 1:3 and 2:3 paper sizes. It supports many industry standards and interoperability with other CAD packages. Its technology allows it to create efficient and accurate 2D and 3D models for the preparation of architectural and engineering projects. ca3bfb1094

Tag Archives: phare training This is a guest post from David Baddour. What is the use of a phare in a shipwreck scenario? How will the recovery team use it? Will they be able to use it on day 1 or will they need to adapt? For those unfamiliar with a Phare, it's a system for sending and receiving onshore radio-telephone communications and it is used by ships at the risk of losing one of their communications systems or losing a ship. It's a multi-sensory system that includes a transmitter, receiver and a marker. On a shipwreck, the marker is deployed and recovery vessels have a phare on the bow that can be used to transmit onshore, from shore or from a plane. As the phare has a range of 10 nautical miles, that gives a good enough radius that you can locate a wreck in the most part of the world, even if you are only a few miles away. For a shipwreck, there are three primary uses for the Phare. Firstly, to locate the wreck, so that the team can find it and recover it. Secondly, the Phare has a data link that will allow the team to collect information and images about the wreck. Thirdly, if there is a life raft on the wreck, the Phare will
