The Photoshop learning curve is steep. Too many people think of Photoshop as a shortcut. It isn't. If you're a beginner, take a deep breath and really study all the settings. There's no substitute for taking time to really understand it before you start taking shortcuts. Taking shortcuts is usually a bad idea, but using a version of Photoshop that's not up to date is just plain bad. You can enjoy many of the modern Photoshop features in earlier versions of Photoshop without dropping a lot of money (or using pirated software). You may not need Photoshop if you have a good graphics program that supports layers or an artistic background. But if you do need Photoshop, try the tutorials online before you download the software, and always make sure that you have a trial version of the software (usually free). In that way, you can try out the program first and see whether you like it. The learning curve can be a bit steep, though. Photoshop is a powerful tool, and I suggest that you don't try to use it unless you really have a lot of experience in using raster art programs. Illustrator is a vector graphics program. It was created by a team that included popular graphic designer John Trudell, who designed the look of Adobe's software. It was developed from the outset to be used both with raster images and vector images. Illustrator is a major competitor to Photoshop. It has a learning curve similar to Photoshop, but when you're at the command line, it can be less intimidating. The interface itself is quite pretty. Adobe concentrates on professional uses, as you would expect. Using Illustrator, you can create vector graphics that can be scaled up or down without any loss in quality. Unlike Photoshop, which uses a layer-based editing system, Illustrator uses a traditional "wiring" system that enables you to edit shapes individually. Illustrator has many features that enable you to do things that aren't possible in Photoshop. You can create your own clipping paths and masks that you can save and use for other projects later. Even so, Illustrator is not a good choice for beginners. If you want to create

high-quality vector graphic images, you need a lot of experience and training to use Illustrator well, especially for more advanced uses like animations. You can find tutorials on the web for Illustrator, but like Photoshop, many of the tutorials are

not have to go far out of its way to find clear statements that the hands-off approach was no longer working. Like the striking defeat of the Senate filibuster of the AHCA, Senate Majority Leader Mitch McConnell has had more than enough time to realize that he can no longer claim that Senate Republicans are beholden to their base. Or, more bluntly put, there is now nothing to lose for Senators Susan Collins, Lisa Murkowski and John McCain who all voted against the President's health bill in March. They are all free of the base's vise grip and therefore can support this administration's latest overture. Concerns about a border wall? Check. Concerns about selling weapons to known human traffickers? Check. Concerns about the rights of women and children? Check. No. The three are now free to be on the record that they do not support the right-wing agenda and to get in line with their colleagues. If these Senators are eventually forced to bow to pressure from the base, they should have left it to their colleagues to publicly grapple with how they are handling the situation. They have called their base's bluff and won. Their constituents see this divide in the party and believe the right-wing agenda is the reason for it, and it is clear the nominees to the Supreme Court and lower courts are not going to carry that right-wing agenda. Congress, unfortunately, does not have a redistricting window that will allow it to fight back in some form. This is the real reason why the Democratic base has taken this fight to the courts. This is also why the right-wing agenda is in full retreat. The President is afraid of the backlash from potential right-wing primary challengers in 2018, which would begin to mitigate some of the concerns of low turnout in a general election. The President therefore no longer needs to look out for his base, and he has lost the ability to bend the party in his direction. Concerns about the future of the GOP? Check. Concerns about the future of the nation? Check. Concerns about the President's chances of reelection? Check. The now-former Senators can finally vote for a Supreme Court nominee who does not have ties to far-right conspiracy theorists and a nominee to the U.S. Circuit Court of Appeals in New Orleans who is a reliable conservative. It is clear that the Republican Party needs to be a much better version of itself and that it
