For detailed step-by-step instructions, feel free to download the instruction DVD and start right away. Get up and running in no time!Q: Query database by searching for the returned value I have a stored procedure that grabs data from database. The stored procedure works fine when I run it via web application. I would like to get the table names that are returned by the stored procedure by searching for the

returned value Example I have this code: CREATE PROCEDURE [dbo].[GetStaffCategory] @StoreId INT AS BEGIN SELECT [StaffCategory].categoryName FROM [StaffCategory] LEFT OUTER JOIN [StaffList] ON [StaffList].[CategoryId] = [StaffCategory].[Id] WHERE [StaffCategory].StoreId = @StoreId END The code above returns all the categories. The stored procedure above should return the [StaffCategory].categoryName values that are in the [StaffList].categoryId values A: Sure you can search for the string, c6a93da74d
