

I'm trying to install System Manager 2.2 on a Windows 7 64-bit machine with only 32-bit Java installed and getting the message "OnCommand System. ServiceModel.Channels.IOrganizationService.IsClient" with error "The system cannot find the specified file" I have already tried to install a version of Java that works with the 32bit version (e.g. java7-jdk) and no luck. Something similar to it, but the 32-bit version of Java works without problems. Can anyone suggest a solution to this problem? What am I doing wrong? I tried to install Java in 32bit in both compatibility modes (Windows XP and Windows 7)... Any ideas? thanks to Update:
