## Lawrence C Hamilton Statistics With Stata Version 12 8 Edition BETTER

Lawrence Hamilton has taught statistics courses from undergraduate to advanced graduate levels at the University of New Hampshire and has written numerous statistics texts and software manuals, including *Modern Data Analysis*, *Regression with Graphics*, and *Data Analysis for Social Scientists*. These books take an applied, data-oriented approach to understanding statistical methods and the analytical process. Dr. Hamilton's current research concerns climate change and environment-society interactions in the Arctic. Lawrence Hamilton is professor of sociology and senior fellow in the Carsey School of Public Policy at the University of New Hampshire, where he teaches courses about society in the Arctic, survey research, and statistical analysis. His books include *Regression with Graphics* and *Statistics with Stata*; the latter has been translated into Arabic and Chinese. Dr. Hamilton's research focuses on human-environment interactions, in locations ranging from Arctic Alaska to northern New England or the Intermountain West. His most recent papers include "Cold Winters Warming Perceptions of Climate Change in the North Country (Weather, Climate, and Society 2018)"; "Demographic Variation and Change in the Inuit Arctic" (*Environmental Research Letters*, 2018); and "A Change in the Wind: U.S. Public Views on Renewable Energy and Climate Compared" (*Energy, Sustainability and Society* 2018). Lawrence C. Hamilton is professor of sociology and senior fellow in the Carsey School of Public Policy at the University of New Hampshire, where he teaches courses about society in the Arctic, survey research, and statistical analysis.

## Lawrence C Hamilton Statistics With Stata Version 12 8 Edition

See the discussion of Fig. 3, which graphically displays the difference in mean opinion between current and long-ago dam removals. This difference is estimated as an error term and also appears as an error bar in Fig. 3. The error bars appear in Stata's plot window as a bar extending from the middle of the error (x-axis) to the number of standard errors away from it (y-axis). This error bar is especially useful for comparing differences between groups, in this case, opinions of dams in the current decade compared with those of dams removed at least a decade ago. *Statistics with Stata* also includes a detailed appendix on Stata's data management features. This appendix, which follows the book's data management chapter, is a great addition for those unfamiliar with the vast array of Stata commands for managing data. The appendix covers such topics as importing and exporting data, executing commands with multiple data sets, creating variables and variables' lists, and cleaning data. In addition to the appendix, this book contains numerous examples and working Stata programs, which are essential for researchers and analysts who want to learn how to use Stata effectively. Despite this similarity, it is clear that there are many important differences between commands. Many of these differences have to do with the user interface that Stata provides. Stata commands are separated into tabs, and the tab labels are shown in the output window. Thus, a command will appear in a different color if it is a specialized command, such as one dealing with graphics, with statistics, or with syntax. This also helps the user find commands in the output window, as the commands will appear in a different color. The blue and black text will be easier to read against a gray or white background, as in this figure. 5ec8ef588b
