

If a user accidentally selects "Hide OS Drive in Explorer" in the "Configure Windows Explorer" window, this will cause Windows Explorer to hide a user's operating system drive from view.

Note: This configuration will remain in force until the user changes it back by going through the "Configure Windows Explorer" window. The SysTools Data Recovery Wizard will help you quickly recover your lost files. Scan a list of potentially corrupted drives and view their contents. You can repair partition or bad sectors, or even investigate the files if you're able to mount the drive. Save your files and have fun! Are you facing troubles while working on your precious data on your USB flash drive, SD card, or hard drive? Now, it is not necessary to panic, instead try all the solutions below to solve this problem. You can recover all your data and save all your files safely. Restore Files and Free Up Disk Space Easily Launch the SysTools Data Recovery Wizard. Under "Select a drive to scan", select the drive where you had saved your files. If you can't find any hard drive on your system, press "Ctrl + R" to search for it. Once the scan is finished, the recovered files will be displayed in an easy-to-read list format. You can search your data by specific file types, dates, names or extensions. You can save your files into the directory you want. You can even copy your recovered files to your hard drive. When you use a flash drive to store your files, it is critical to save the files on it to ensure that you can always retrieve them if the flash drive is lost. Even if your flash drive isn't plugged into a computer, you can still save files to it by using the built-in write-protect feature of the drive. Even if you accidentally format a flash drive or delete its files, you can always recover your files by using the SysTools Data Recovery Wizard.

If you are looking to recover deleted data from your Windows computer, you should use the data recovery software as there are chances that the data might be in some other storage devices. That is why you should try out the data recovery software which will help you to recover data from any storage device like pen drive, memory card, external hard drive, and CD-R/DVD-R disc. The recovery tool offers a full

---

solution to get lost data. In case of data recovery from pen drive, you just have to attach the pen drive to the computer and the data will be recovered easily. Almost all the data are inaccessible. But, you can try some other alternative options to recover data. One of the most efficient and reliable solutions is SysTools Hard Disk Recovery Wizard. It is one of the best data recovery software which scans the hard drive of your computer in no time. Using this tool, you can recover documents,

---

images, videos, and other unwanted files which were deleted by the user. The frequently occurring problem of hard drive data loss is due to virus attack and storage media failure. Due to the failure of storage media, you may not be able to retrieve your files. So, it becomes really difficult for you to access your files and folders. If this is the case, then you can use the data recovery software to retrieve deleted data. The data recovery software offers the facility of scan options

---

to scan and recover all types of files from corrupt storage media in a fraction of a second. SysTools Hard Drive Data Recovery tool is an effective tool for recovering the desired data from hard drive. It will allow you to recuperate data through the backup of important files, folders and even emails. In addition to this, if you have any type of deleted data in your system, then you should use the tool because it will allow you to recover such types of data. The tool

---

supports various types of OS, including windows XP, windows 7, windows 8, windows Vista and windows 10. 5ec8ef588b
