LoadRunner is the most widely-used and trusted Load Testing tool in the world. HP LoadRunner will work on any of the following Operating Systems: Windows 7 (32 bit or 64 bit), Vista, XP (32 or 64 bit), 2000, NT 4.0, NT 5.0, and 2000, along with the following RDBMS: MS SQL Server 2000, 2000, Express Edition, and NT, SQL Server 2005, 2000, and Express Edition, SQL Server 2005, 2000, and Express Edition, Oracle SQL*Plus, PostgreSQL, MySQL, Interbase, Oracle 8i, SQL Server 2000, 2000, and Express Edition. Unfortunately, I've never used it. Other Features: No maintenance fee, unlimited users, free trial version available, HW/SW patches available. It's a very simple tool to use and the feature list is extensive. The problem though is that like most tools out there, you will have to pay for that feature list which has many features. There is also a lot of information already available online but that will cost you a lot of money because you will have to pay to attend training classes or buy a training book. The LoadRunner tool allows you to load a series of tests on any web application you want. Generate the scenarios, edit them, add them and run them. Loadrunner is designed to be used either on-site or in the cloud and testing may even be performed remotely. Loadrunner's intuitive interface allows a whole world of possibilities. In fact, Loadrunner provides a free version, which includes 1,000 users in free use mode, and supports up to 5,000 users with a $25,000 a month license, as well as a loadrunner 5,000 users with a $100,000 a month license. LoadRunner leverages the load-under-test (LUT) to respond to load by simulating a user, or a number of users, and providing the client with meaningful load data. The LUT provides a platform for testing web applications and web services without having to install your own hardware and software, and without having to allocate a significant number of human users. Simply load test web applications and web services. 5ec8ef588b
