Alphabet Names is a name plate maker that makes it easy for anyone to create the perfect logo or banner for their child's big day. With a fresh UI, built-in themes and a new support page for custom names, Alphabet Names has made its way from the beta stage to being ready to take the place of text bars that once ruled the world. Fun and interactive interface You can quickly change the style and size of your text using two modes: "Formatting" or "Canvas". The "Canvas" mode allows you to customize your text to the dimensions you need and play with the size and opacity of the font. The "Formatting" mode makes it easy to adjust the font, size, position, and rotation. You can even create square or rectangular logos using these settings. There's a wide selection of fonts included, as well as over 3,000 designed for you to choose from. Some of the available fonts are "Lato" and "Raleway", for example. The number of available text themes is less, though. And there's no direct link to text backgrounds. Add images and customize text If you've got an image you'd like to use, it's as easy as adding it as a background in the settings of the "Formatting" mode. Similarly, you can create custom text, which is basically just a set of characters, that you can place and position. There are almost 20 different types of characters available, as well as around 50 predefined combinations that you can mix and match. Multiple page formats can be used to create a unique name plate. You can also import a text file to use as-is, or use the text highlighting tool to select and copy some of the text and paste it elsewhere. The ability to customize page backgrounds is also available, so you can create backgrounds and borders to suit your design. There are over 5,000 styles available on the developer's website. There is no way of choosing what you want to be downloaded. All the existing styles are available, but if you'd like to have a closer look at what they look like, you can look at the entire alphabet chart. If you have images, you can add them to the name plate in the settings of the "Formatting" mode. Unfortunately, the demo accounts have a limit of 100 images, so you might need to subscribe. Easy to use and simple to create The UI is well designed, so you can adjust the format of your text
