The most notable feature in this release is the new Camera Raw panel, which we'll cover in a moment. But you'll find plenty of other refinements and updates, including Action Center—a new way to share your documents across devices, an improved Layer panel, improvements to Live Sharpen, and more. The product also comes with the integration of Lightroom 6, which now enables you to leave Lightroom open or closed with linked Photoshop as your main window via the Set as Main Application option in the browser preferences. However, in comparison to the hefty price tag, the edits that it makes are able to be streamlined in a simpler and more effective manner. Is it a good upgrade? Or is it an intriguing puzzle to you? Let's dive into the latest version. Up to this point, Lightroom 5 has been the best photo organizer for me. It offers, among other things, the best workflow of any press yet. I like that I can get in and edit a lot of a library of images without having to print or export anything. A new module in Lightroom 5 amplifies the problem it already solved with the addition of a synthetic function. This automatically applies what you click and then you tell it what settings you want. However, some things in Lightroom 5 can be amazing… and some people think its just way too inconsistent. This is true of some of the efficiency improvements. It is better to master it then to not learn it, but with the new bridge, the time for that is coming to an end.

The long-awaited new features for Photoshop will be available for download in the Creative Cloud environment (Photoshop and Adobe XD) beginning Tuesday, July 10, for Photoshop CC and Photoshop CC Extended. "We're excited about the next-generation Photoshop features we're bringing to the world. With the release of Share for Review and new selection enhancements, Photoshop CC will come with best-in-class tools, features, and performance," said Phillip Huang, vice president and general manager, Photoshop. "These innovations, combined with the latest generation of our AI capabilities, enhance the Photoshop experience for our customers, enabling them to work faster, smarter, and more effectively." Share for Review: With LOBs and marketers more working on projects in collaboration with internal and external stakeholders, professionals increasingly need to access information, assets or present their work at a glance with the confidence that it is always up to date. With Share for Review, LOBs and marketers can collaborate on the same PSD file, from multiple locations, with a simple click. Share for Review is a new collaborative live editing platform that makes any Photoshop file available for live edits via the Share panel in Creative Cloud. While Edit and Share works independently, Photoshop allows these two applications to communicate through the DocumentSynchronization feature. LOBs can create a new file by sending it to Share Panel, and then copy the DocumentSynchronization information to their Edit Panel for further editing. Clean Share functionality enables LOBs to reset DocumentSynchronization status while share is in progress.
