I'm sure some of you have heard of CC as a whole, and that is all great. But for me, the software is the least of my concerns and I want to see and use the software that truly (I think, not to be coy) lets me deliver and shoot my very best work. Although the sort of features I've been led to expect, the focus on real-time workflow and speed, and the user experience are all there, I've been using Photoshop much less than I usually do. For some reason I'm always a little worried about what I'm going to do when I get to work, always making sure I remember a ton of other things I've been doing. This time around I've been forced to really focus on what I'm doing at any given moment, only doing the minor actions if needed.

I guess that's what you get for getting so used to the software. One thing I don't like is that the iCloud doesn't sync my adjustments. The way someone created their adjusted version of the PSD file is really important to me, and I don't want to be pulling a different version of the file into my computer. I thought that version control was one of the major changes in 3.0, and it's something I now wish I had. Also, I can't seem to get around the fact that CC is a subscription service. Used to be that the programs you bought just got updates (and added new features) over time, but now you have to buy the software and upgrade and you can't even get updates to premium features like the one I've been referring to. I know that if I'm going to be developing and duplicating files a lot, better to be on an online service for continuity. But I'm not. And that's the problem: the software needed to be the best in the market (and it is), not just get updates eventually.

The Photoshop Lens Blur feature is a state of the art blur filter. You can now get a professional-looking effect very easily just by tapping on the screen or by moving your finger on the display (animation supported). "The Photoshop Lens Blur feature uses a Dual-axis lens model to form a variable amount of blur at an angle, so the effect never disappears for any image no matter what you are holding or seeing. By simply dragging your finger anywhere on the display, you get 100% blurring with one tap, and if you keep the finger moving, you get continuous blurred images. One button controls the blur-angle and other button controls the end of blurring. Simply tap to start and swipe to stop (note, Lens Blur only works for RAW images available in the Adobe Camera Raw software version 8 or newer). 933d7f57e6

Every update and professional version of Adobe Photoshop has a version number and this is called the CSN (contributor series number). So, whether you're on a Mac or Windows, your version is identical. The CSN counts down from adobe.com, which is Photoshop CS9.
