Wondering how the Apple Watch Series 4 is doing? The new $399 Apple Watch Series 4, introduced at its launch event on September 12, is attracting new buyers to the Apple Watch . I've been using the new watch for about a month now, and it is a welcome improvement over its predecessor. In fact, earlier this week, I've sold my last Apple Watch Series 2 and got myself the Series 4. Well, I've been using that new watch for a week, and it's pretty much worth every cent. **Steve Jobs** introduced the Apple Watch Series 2 back in 2014 during the Cupertino company's iOS 8 launch. Although Apple held back the Series 4 until this year, it used to be that the company usually upgraded its watch every year. The first versions of the Apple Watch were already capable of connecting to Macs and iOS devices. The second generation, like the Series 4, added features including the ability to cycle through watch faces. But Apple didn't support third-party software on the watch until this year. Composite Mode now uses templates that determine how a layer's contents will be blended with others. While the templates do remind me a bit of layers of paint and how they react to each other, I find this a step in the right direction. They help you organize the document a bit better and avoid any visual mistakes like blurring an area where you want to keep crisp edges. After inside-out combining—which was a major step toward freeing Photoshop users from the limitations of layers that only mimic black-and-white film—the question becomes: What about transparency, in addition to color and white? File size is always a concern, and it's a good thing that while the size has increased by about 75 KB, I didn't notice any degraded image quality. First, I'd like to point out that the separate Windows installer now also includes the free Photoshop Lightroom CC 5.2.2. I clicked on the Watermark Removal slider and it was a snap to remove it. File size for the installation is 3.9 MB vs 45 MB previously. The program is also more stable in my experience. It still crashes every now and then, but the number of times has significantly slowed. I'm not sure why, then, Adobe chose to double down on the previous release's 4.0.1 update, with minor file size increases, but no real improvements. …
