The Stroke Selection Tool is essential for selecting objects within a photo. It allows you to make a selection around an object simply by using strokes. With the Stroke Selection Tool, you can easily click on small strokes to select an object or click around a large stroke to select them. By default, the Stroke Selection Tool is shown with the color white-filled-strokes, but you can also use the other color options, like dark-gray-strokes, light-gray-strokes, black-strokes, and even the white-strokes. Another big win for the Stroke Selection Tool is when creating objects from images that come in Photoshop on Windows 10. Now when selecting an object within an image, the Stroke Selection Tool can create a new object you can move and edit within Photoshop. This is especially helpful if you need to create something from several parts of an image. You can even flip your image in order to change the direction and position of your strokes, and use the Pen Tool to refine a selection. The selection doesn't show up as a selection outline, instead it shows as a transparent fill area. I preferred this method as you have more control over the bounding box and you can move the selection on top of other strokes.
